SUMMARY

Full-stack engineering candidate focused on building product workflows that connect polished user interfaces with reliable APIs, data models, payments, and deployment pipelines. Hands-on across React, Next.js, TypeScript, Python, FastAPI, SQLAlchemy, PostgreSQL, Docker, and cloud platforms, with experience shipping authentication, dashboards, document workflows, and API integrations.

CERTIFICATIONS

Oracle Cloud Infrastructure 2025 Certified Observability Professional; Oracle Cloud Infrastructure 2025 Certified Generative AI Professional; IBM DevOps.

EDUCATION

Vishwakarma Institute of Technology, Pune - B.Tech in Computer Science Engineering | Jul 2023 - Jun 2027
GPA: 8.98/10

SKILLS

Programming: JavaScript, TypeScript, Python, Java, C++, C#, PowerShell 7
Frontend: React.js, Next.js, Vite, Tailwind CSS, Framer Motion, GSAP, Three.js, D3.js, Recharts
Backend: FastAPI, Flask, Django, Express.js, ASP.NET Core, Spring Boot, REST APIs, GraphQL API Design, JWT
Databases: PostgreSQL, MySQL, MongoDB, Redis, SQLAlchemy
DevOps/Cloud: Git, Docker, AWS, GCP, Azure, Vercel, GitLab
OS: Windows Server, Kali Linux, Ubuntu

EXPERIENCE

Software Development Intern | Syngenta | Apr 2026 - Present
Python, SAP CPI, BPMN/XML, Generative AI, DOCX Automation

- Engineered a SAP CPI documentation generator that converts 7 artifact groups into one structured DOCX output, including iFlow packages, BPMN/XML flows, schemas, mappings, adapters, Groovy scripts, and external parameters.
- Classified 5 integration layers before generation to improve traceability across main flows, local subprocesses, message routes, adapter metadata, and error-handling paths.
- Automated a 4-step workflow for artifact discovery, parsing, AI summarization, and document formatting while supporting up to 80 text artifacts per package.

PROJECTS

Lead Capture and Project Showcase Platform | React, Vite, Framer Motion, GSAP, Three.js, React Three Fiber, Postgres, Vercel

- Architected a deployed Vite/React project showcase with 32 reusable components, motion-driven navigation, terminal commands, scroll progress, hover previews, custom cursor behavior, and responsive project/publication sections.
- Designed a Vercel serverless contact API backed by Postgres with schema creation, input validation, bot honeypot field, IP/user-agent capture, and normalized contact submissions.
- Integrated 3D and interactive UI systems using Spline, Three.js, React Three Fiber, GSAP, Lenis, and Framer Motion for an immersive deployed personal brand experience.

Honey Proxy Deception Firewall | React, TypeScript, Flask, SQLAlchemy, Docker, Recharts

- Engineered a full-stack security dashboard with 19 React/TypeScript components, Flask APIs, SQLAlchemy event models, and Dockerized firewall, honeypot, and real-server services.
- Delivered a live SOC interface with 900ms polling, traffic tables, analytics charts, session drilldowns, honeypot logs, attack-surface views, report archives, and toast-based operator feedback.
- Connected dashboard controls to backend APIs for scenario start/reset/pause/resume, live payload refresh, honeypot feeds, session detail, and forced incident report generation.

InvoX Invoice Financing Platform | Next.js, React, TypeScript, FastAPI, SQLAlchemy, PostgreSQL, Razorpay, Docker

- Architected a full-stack invoice financing marketplace across 21 Next.js pages, 22 FastAPI route modules, and 26 SQLAlchemy models for vendor, lender, admin, invoice, marketplace, chat, and repayment workflows.
- Designed JWT authentication, protected routes, vendor onboarding, KYC/document uploads, invoice creation, marketplace listing, lender funding, notifications, and admin actions.
- Integrated Razorpay order creation/verification, invoice PDF generation, smart-contract PDF downloads, blockchain-style invoice registry, and audit trails for funding and repayment transactions.
- Orchestrated OCR, Gmail, and Telegram ingestion services plus Docker/GCP deployment scripts to support multi-channel invoice intake and cloud-ready deployment.

NOTABLE ACHIEVEMENTS

- Published 3 research papers in IEEE and Springer venues.
- Technical and Associate Secretary, MLSC and Student Development Club 2025; coordinated technical events, workshops, and student development initiatives.
- Won 2+ national-level hackathons across AI, software engineering, and innovation competitions.
